Professional Summary

Aspiring Software Engineer and Python Developer with hands-on experience building backend and IoT-based applications using Python, SQL, Flask, and Object-Oriented Programming. Skilled in developing modular applications, problem-solving, debugging, and implementing efficient backend logic. Experienced with Git, GitHub, SQLite, and real-world project development. Passionate about building scalable software solutions and continuously improving development skills.

Technical Skills and Tools

Programming Languages: Python, Java

Frameworks & Backend: Flask, REST APIs

Databases: SQL, SQLite

Developer Tools: VS Code, GitHub, Git, Eclipse, Arduino IDE, Microsoft Excel

Core Computer Science: Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, Computer Networks, DBMS

Additional Skills: Backend Development, Problem Solving, Debugging, API Integration Basics, Version Control

Projects

CLI-Based Bank Management System | *Python, OOP, JSON, File Handling, Git, CLI*

- Developed a CLI-based banking application using Python and Object-Oriented Programming principles.
- Implemented account creation, deposits, withdrawals, balance inquiry, and interest calculation functionalities.
- Designed modular architecture using reusable Account and Bank classes for maintainable and scalable code structure.
- Added exception handling and transaction validation to prevent invalid operations and insufficient balance errors.
- Implemented daily withdrawal limit tracking with automatic reset using date-based logic.
- Used JSON and file handling for persistent account data storage.

IoT-Based Smart Parking Management System | *Python, ESP32, RFID, Arduino IDE, Blynk*

- Designed and developed an IoT-based smart parking system for real-time parking slot monitoring and automated access control.
- Integrated ESP32, IR sensors, and RFID technology for vehicle identification and slot detection.
- Connected hardware devices with Blynk cloud dashboard for remote monitoring and live status updates.
- Developed automated gate control and parking allocation logic using Python and Arduino IDE.
- Improved communication between sensors and cloud platform for accurate real-time slot availability tracking.

Education

Bachelor of Engineering in Electronics and Communication Engineering **Sep 2021 – June 2025**

Panimalar Engineering College(Affiliated to Anna University; Approved by AICTE)(CGPA: 8.35/10) Chennai, Tamil Nadu

Board of Intermediate Education(Class XII) **June 2019 – July 2021**

Shri Veda Junior College (83.1%) Tirupati, Andhra Pradesh

Board of Secondary Education(Class X) **June 2018 – May 2019**

Vedavyasa Vidya Niketan (CGPA: 9.8/10) Tirupati, Andhra Pradesh

Certifications

Complete Python Pro Bootcamp **April 2025**

Python fundamentals, problem-solving, OOP, and hands-on coding projects - By Udemy *Online*

Agentic AI and Generative AI(Pursuing) **2026**

Exposure to modern AI tools, LLM workflows and developing basic AI-powered applications. *Online*

Java Programming **July 2024**

Core Java Fundamentals and OOP concepts - By QSpiders *Chennai*
